Reporting standards for MRS

Summary following minimum reporting standards in MRS generated in Osprey See Lin et al. 'Minimum Reporting Standards for in vivo Magnetic Resonance Spectroscopy (MRSinMRS): Experts' consensus recommendations. NMR in Biomedicine. 2021;e4484. doi.org/10.1002/nbm.4448

1. Hardware

a. Field strength [T]	3 T
b. Manufacturer	GE
c. Model (software version if available)	MR750 (DV 26)
d. RF coils: nuclei (transmit/receive), number of channels, type, body part	1H, 32 channel head coil
e. Additional hardware	-

2. Acquisition

a. Pulse sequence	PRESS
b. Volume of interest (VOI) locations	Anterior cingulate cortex (ACC), alternating between left and right for every other patient
c. Nominal VOI size [mm ³]	20 x 20 x 20 mm ³
d. Repetition time (TR), echo time (TE) [ms]	TR 1500 ms, TE 35 ms
e. Total number of averages per spectrum	128 total averages with 8 averages per subspectrum
i. Number of averaged spectra per subspectrum	
f. Additional sequence parameters (spectral width in Hz, number of spectral points)	F1: 5000 Hz, 4096 points
g. Water suppression method	CHES
h. Shimming method, reference peak, and threshold of acceptance of shim chosen	Automated 3D B 0 field mapping
i. Trigger or motion correction	None

3. Data analysis methods and outputs

a. Analysis software	Osprey 2.4.0
b. Processing steps deviating from Osprey	None
c. Output measure	tCr, rawWaterScaled, CSFWaterScaled, TissCorrWaterScaled
d. Quantification references and assumptions, fitting model assumptions	Basis set list: AscAsp,Cr,CrCH2,GABA,GPC,GSH,Gln,Glu,ml, Lac,NAA,NAAG,PCh,PCr,PE,sl,Tau,MM09, MM12,MM14,MM17,MM20,Lip09,Lip13,Lip20,tNAA,Glx, tCho,tCr Fitting method: Osprey baseline knot spacing 0.40 ppm

4. Data quality

a. SNR (Cr), linewidth (Cr) [Hz]	SNR: 48 +- 7, linewidth 5.72 +- 1.08 Hz (for patients n=31) SNR: 49 +- 6, linewidth 5.46 +- 0.67 Hz (for healthy controls n=19)
b. Data exclusion criteria	Visual inspection
c. Quality measures of postprocessing model fitting (Mean Relative Amplitude Residual)	2.86% (patients) 2.91% (healthy controls)
d. Mean spectrum created with OspreyOverview (patients, healthy controls)	

Sequence: ; Number of subjects: 98 1; Number of Groups: 1
Distribution: Group 1 with 98 subjects;

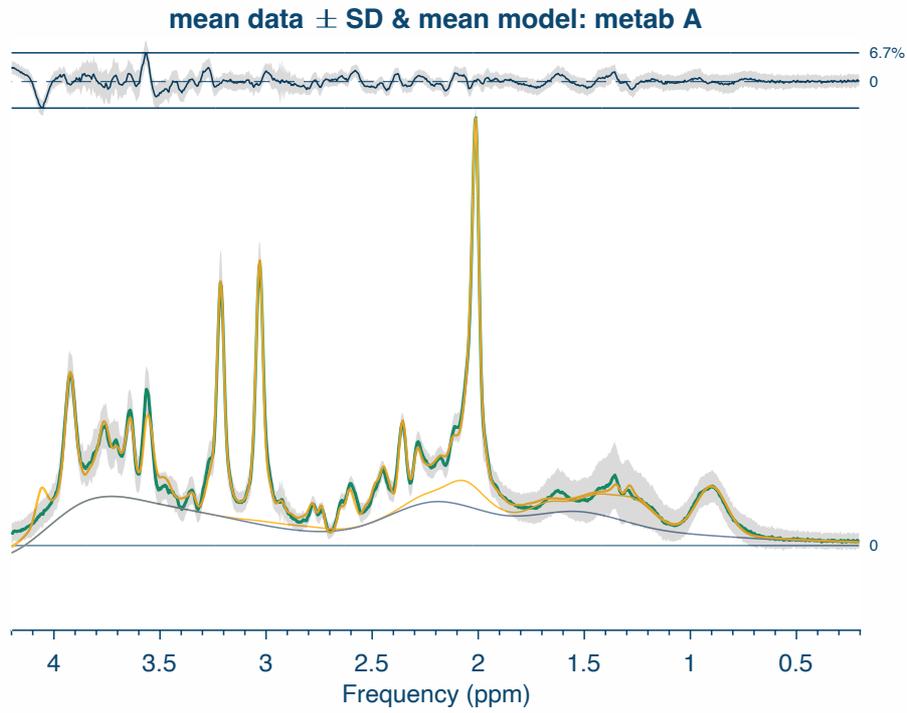

Figure 1 Mean spectrum for patients.

Sequence: ; Number of subjects: 66 1; Number of Groups: 1
Distribution: Group 1 with 66 subjects;

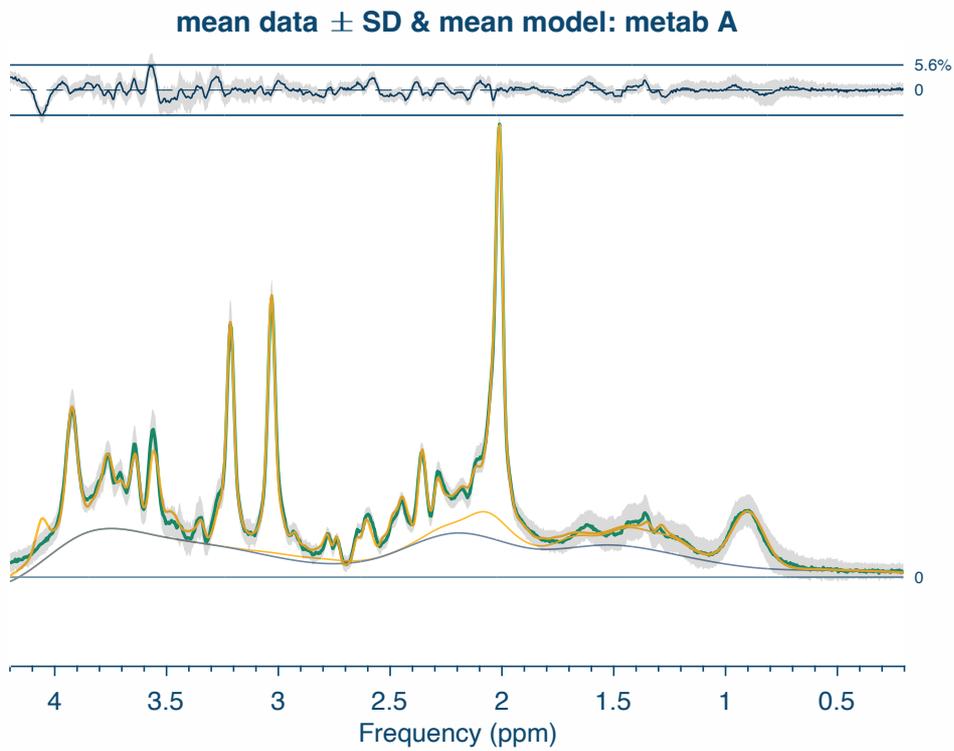

Figure 2 Mean spectrum for healthy controls.

Statistical models and output

Overview of variables and abbreviations

Variable name/abbreviation	Meaning
Kjønn	Sex
Alder_ved_start	Age at start
Antall_stoet	Number of ECTs
MADRS_0	MADRS score at baseline
MADRS_avsluttet	MADRS score at timepoint 3
EMQ_før_samlescore	EMQ score at baseline
EMQ_etter_samlescore	EMQ score at timepoint 3

Metabolites at different timepoints are indicated with *.timepoint* i.e.: tNAA.3 is tNAA-level at timepoint 3.

Linear mixed effects models
