**Figure S1 Effects of PFT- $\alpha$  on SP600125-induced polyplloidization in diploid crucial carp cells.** (A) The cytotoxicity of PFT- $\alpha$  was detected by cell counting kit-8 (CCK-8). (B) Diploid crucial carp cells treated with the indicated concentrations of PFT- $\alpha$  were determined by flow cytometry examination. The “a”, “b”, and “c” represent 30, 40, and 50  $\mu$ M concentrations of PFT- $\alpha$ , respectively.

**Figure S2 Overexpression of MAD2 by recombinant adenovirus pAd-MAD2-GFP-3Flag fusion protein in fin cells.** (A) Expression lever of the recombinant adenovirus pAd-MAD2--GFP-3Flag fusion protein in 293T cells as detected by Western blot. The anti-Flag primary antibody was used at a 1:4000 dilution, while the Marker was diluted 1: 3000. (B) The mRNA expression of *mad2* gene in fin cells transfected with Ad-MAD2 recombinant protein. (C) The protein expression of *mad2* gene in fin cells transfected with Ad-MAD2 recombinant protein. The “Ctrl”, “NC”, and “OE” represent the blank control group, negative control group (transfected pAd-mCMV-GFP-3-Flag-pA), and MAD2-OE group (transfected pAd-mCMV-MAD2-GFP-3-Flag-pA), respectively. Values were normalized by β-actin expression level. Each bar represents the mean ± SD of three independent experiments (\*P < 0.05).
