Table 1. Patient details. Engel scale: I Seizure free, II Rare disabling seizures, III Worthwhile improvement, IV No worthwhile improvement. The average post-op follow-up period was 40.9 months. ATLAH: Anterior Temporal Lobectomy + Amygdalo-Hippocampectomy. HS: Hippocampal Sclerosis. LVFA: Low-voltage fast activity. Type1 = Low-voltage fast activity (LVFA), Type 2 = Preictal spiking with rhythmic spikes of low frequency followed by LVFA, Type3 = Burst of polyspikes of high frequency and amplitude followed by LVFA, Type 4 = Slow wave or baseline shift followed by LVFA, Type 5 = Rhythmic spikes or spike-waves, at low frequency and with high amplitude and Type 6 = Theta/alpha sharp activity with progressive increasing amplitude.
