

Supplementary Material

1 Index supplemental material

- **Supplemental table S1:** all univariable and multivariable analyses with confounders specified.
- **Supplemental table S2:** mean total costs, operating room time and length of stay for patients with uneventful or complicated course, including the distribution of total costs into cost categories.
- **Supplemental figure S3:** healthcare trajectory and costs of patients with uneventful or complicated NFA.
- **Supplemental figure S4:** general representation of pituitary tumour healthcare for patients with uneventful or complex course, distinguishing preoperative, perioperative and postoperative care.

S1: univariate and multivariable linear regression analyses with correction for relevant confounders.

	No	n/a				Size, GTR	n/a			

Abbreviations: *B* unstandardized regression coefficient, *n/a* not applicable, *N* number, *BMI* body mass index, *NFA* non-functioning adenoma, *FSH* follicle stimulating hormone, *RCC* Rathke's cleft cyst, *COPD* chronic obstructive pulmonary disease, *mFI* modified frailty index, *VFD* visual field deficit, *CSF* cerebrospinal fluid, *GTR* gross total resection, *OR* operating room, *ENT* ear, nose and throat, *DI* diabetes insipidus, *SIADH* syndrome of inappropriate antidiuretic hormone secretion, *ELD* external lumbar drain, *LOS* length of stay, *ICU* intensive care unit

Table S2: Mean costs, OR time and LOS in patients with uneventful* or complicated disease course. Note that patients with uncomplicated disease course show lower mean costs, OR duration and LOS, with smaller standard deviation. Of all patients with uneventful disease course, all but one patient was diagnosed with pituitary adenoma. With the exception of one case with RCC, all patients with RCC or craniopharyngioma had a complicated course.

		Total costs			Surgery costs			Hospitalization costs			Diagnostic procedures or consultations			OR time			LOS		
		Mean	SD	N	Mean	SD	N	Mean	SD	N	Mean	SD	N	Mean	SD	N	Mean	SD	N

*Uneventful cases are defined as patients with micro- or macroadenoma undergoing elective TSA performed by two neurosurgeons, with LOS \leq 3 days and without (post)operative complications.

Figure S3: Examples of care trajectories of patients with NFA with uneventful* or complicated disease course, showing lower costs and smaller standard deviation in patients with uneventful compared to complex disease course. Specific data on mean costs, OR duration and LOS are displayed in table S2.

NFA with uneventful care trajectory: mean total costs are 9059 ± 3911 .

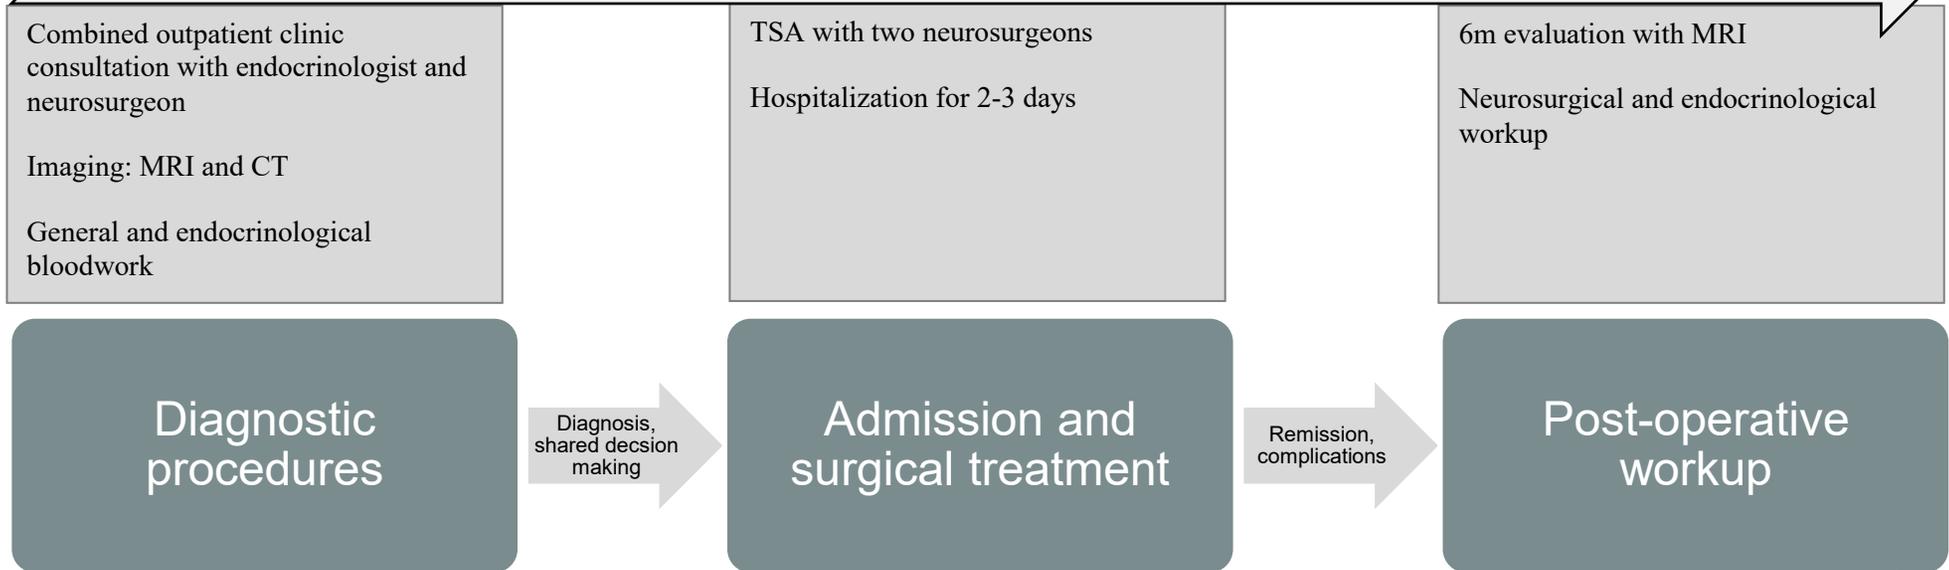

NFA with complicated care trajectory: mean total costs of 16190 ± 12778 .

*Uneventful cases are defined as patients with micro- or macroadenoma undergoing elective TSA performed by two neurosurgeons, with LOS ≤ 3 days and without (post)operative complications.

Supplemental figure S4: general representation of pituitary tumour healthcare for patients with uneventful or complex course, separated by preoperative, perioperative and postoperative care.
