intrahepatic cholestasis of pregnancy, lipid, cardiovascular disease, Mendelian randomization, GWAS

A Corrigendum on

Genetically predicted lipids mediate the association between intrahepatic cholestasis of pregnancy and cardiovascular disease

By Cui J, Zhai Q, Chen M, Yang Z. (2024). Front. Cardiovasc. Med. 11:1401010. doi: 10.3389/fcvm.2024.1401010

In the published article, there was an error in **Figure 1** as published. The SNP screening threshold was incorrectly written as $P < 1 \times 10^{-8}$. The correct threshold is $P < 5 \times 10^{-8}$. The corrected **Figure 1** and its caption appears below.

The authors apologize for this error and state that this does not change the scientific conclusions of the article in any way. The original article has been updated.

In the published article, there was an error. A prerequisite for the exclusion of outlier SNPs is missing before the description of the results of the sensitivity analyses.

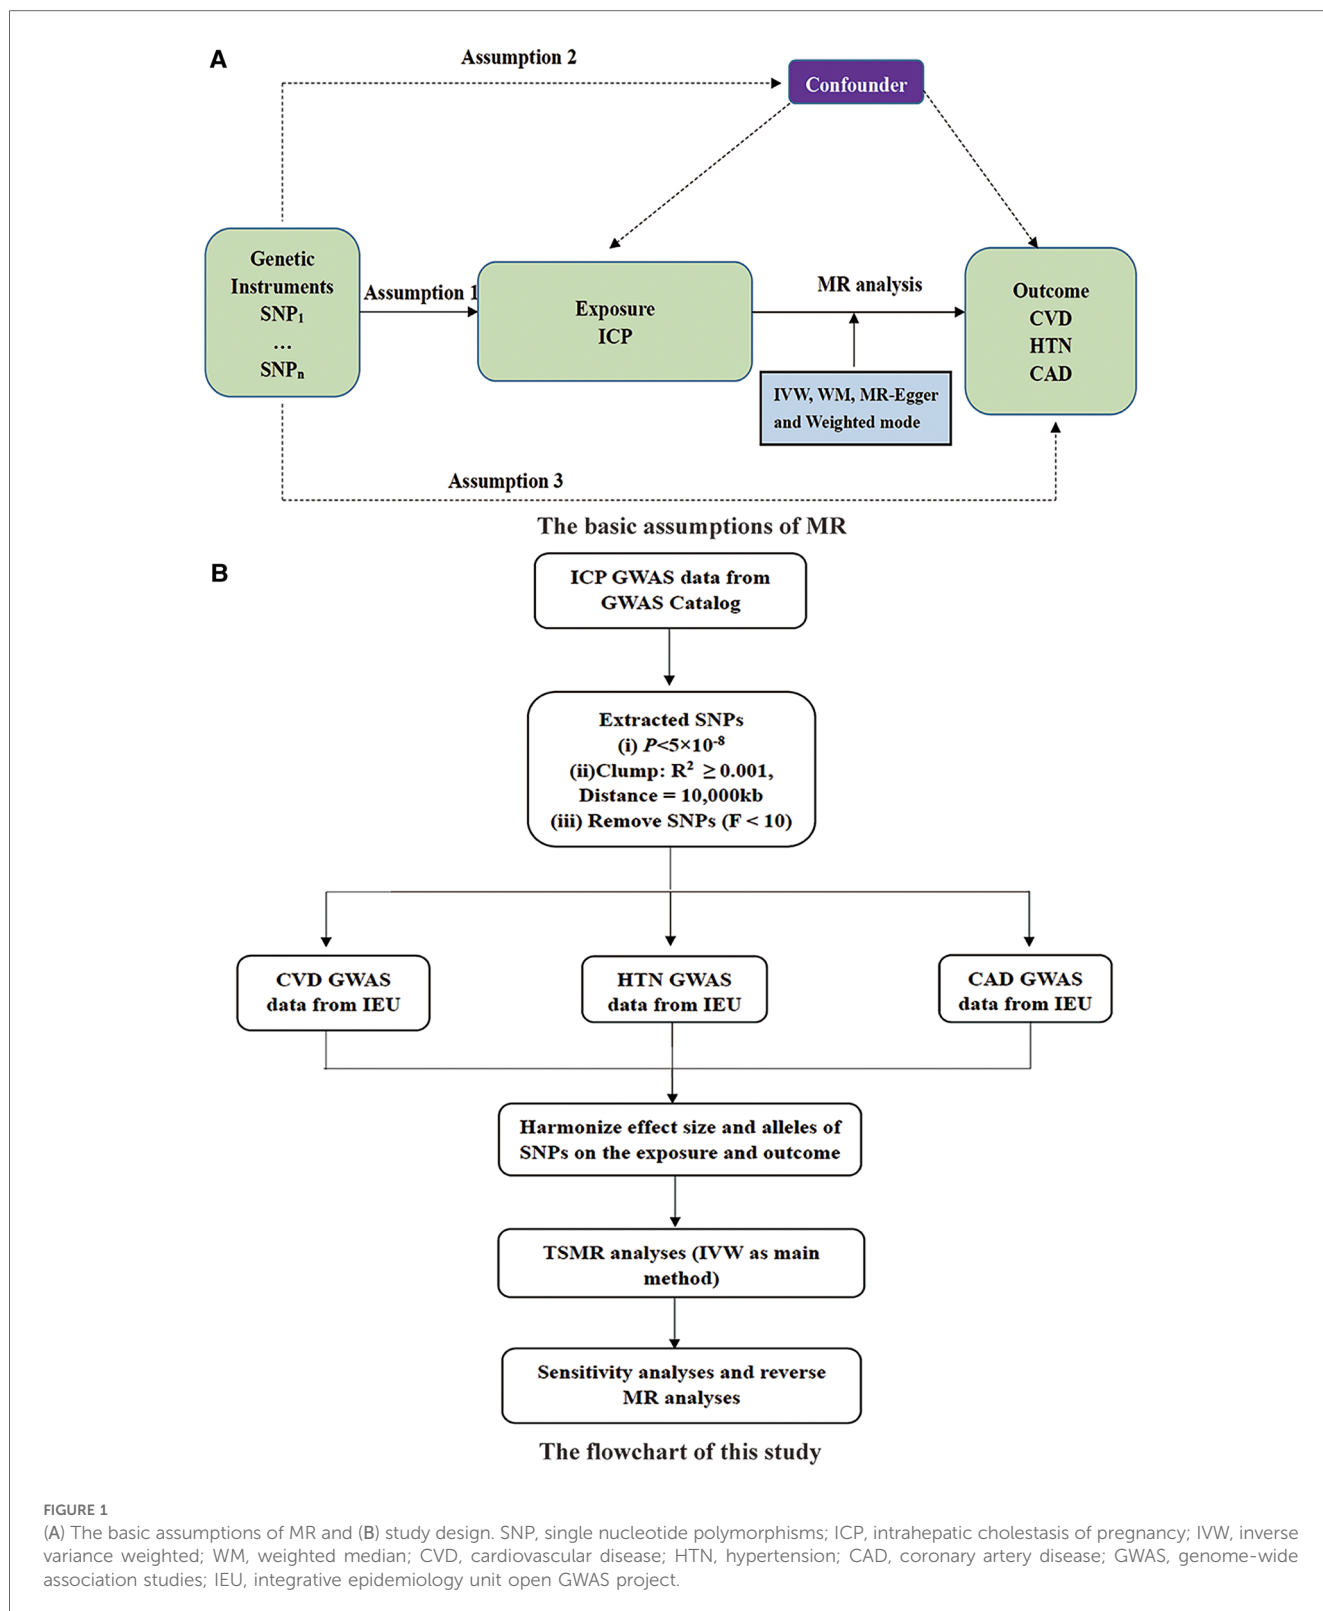

A correction has been made to **Results**, 3.1 Causal effect between ICP and CVD (CAD, HTN) via TSMR. This sentence previously stated:

“The robustness of the results was assessed through Cochran’s Q test, the MR-Egger intercept test and MR-PRESSO, as detailed in Supplementary Material Table S3.”

The corrected sentence appears below:

“After removing outlier SNP, the causal relationship between ICP and CVD still remained. The robustness of the results after removing outlier SNP was assessed through Cochran’s Q test, the MR-Egger intercept test and MR-PRESSO, as detailed in Supplementary Material Table S3.”

The authors apologize for this error and state that this does not change the scientific conclusions of the article in any way. The original article has been updated.

In the published article, there was an error in Supplementary Table 3. The results of the sensitivity analyses in the original Supplementary Table 3 were incorrectly calculated due to incomplete data extraction and exclusion of outlier SNP values; the revised results are shown in the corrected

Supplementary Table 3. The correct material statement appears below.

The authors apologize for this error and state that this does not change the scientific conclusions of the article in any way. The original article has been updated.

Exposure-outcome	Q	Q <i>p</i> -value	MR-Egger interpreter	MR-Egger interpreter <i>p</i> -value	MR-PRESSO
ICP-CVD	9.525	0.146	0.019	0.377	0.244
ICP-HTN	15.110	0.035	0.000	0.931	0.068
ICP-CAD	0.001	0.977	-	-	-
