**FIGURE 3** | Hematoxylin and eosin staining of cells in the spleens (**A**) and the brains (**B**) of ducks infected with DTMUV in the absence or presence of either Rapa, 3-MA, or CQ, respectively. Treatment with saline was used as the control. Images shown were representative from five ducks in each group. The images were with 100X magnification for spleens and 400X for brains. Black arrows: blood cells in the meninx.
