**Keywords:** bioinformatics, animal model, pattern matching, PICRUST analysis, bacterial taxonomy, Alpha diversity, confidence interval, histology

### A Corrigendum on:

#### Curcumin $\beta$ -D-Glucuronide Modulates an Autoimmune Model of Multiple Sclerosis with Altered Gut Microbiota in the Ileum and Feces

By Khadka S, Omura S, Sato F, Nishio K, Kakeya H and Tsunoda I (2021). *Front. Cell. Infect. Microbiol.* 11:772962. doi: 10.3389/fcimb.2021.772962

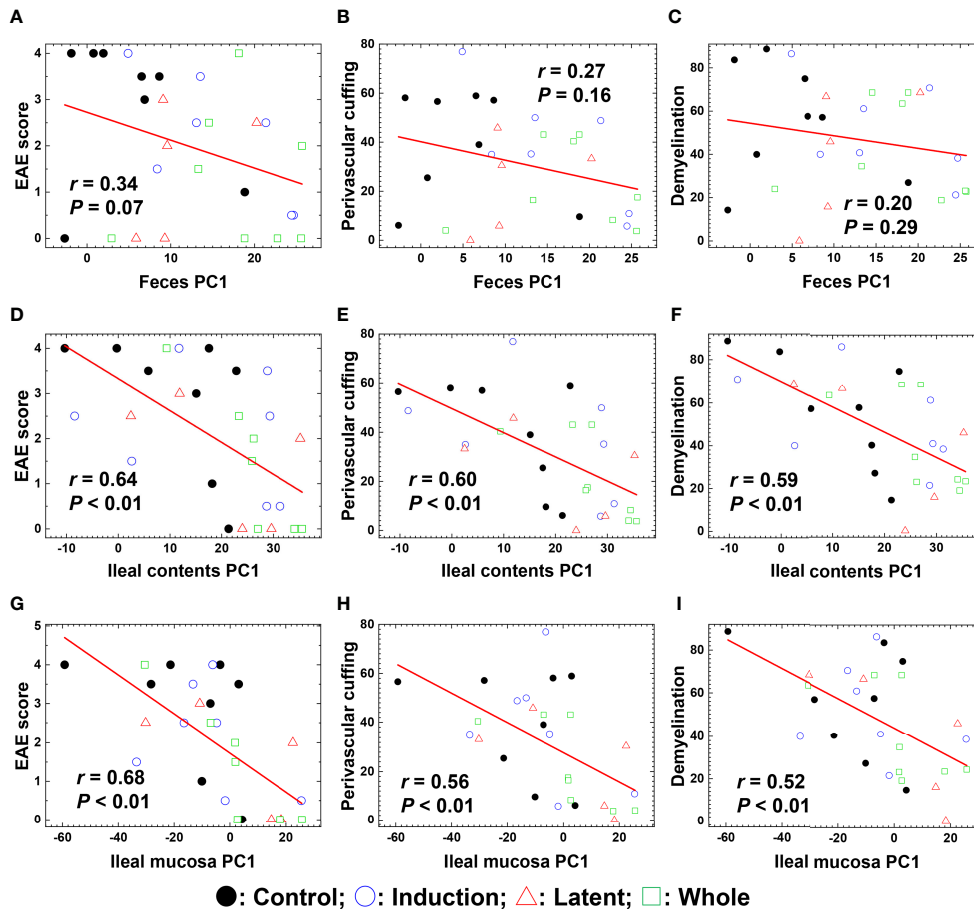

### Error in Figure/Table

In the published article, there was a mistake in the PDF article as published. **Figure 5** with its legend is missing from the PDF article, although the HTML article has included **Figure 5**. The missing **Figure 5** with its legend appears below.

The authors apologize for this error and state that this does not change the scientific conclusions of the article in any way.

**FIGURE 5** | Pattern matching of the microbial PC1 values with the clinical and pathological scores of EAE at the three anatomical sites: feces, ileal contents, and the ileal mucosa. **(A–I)** We harvested samples from the three CMG-treated (Induction, blue circle; Latent, red triangle; and Whole, green square) and control groups (Control, black circle). The microbial PC1 values of ileal contents and the ileal mucosa, but not feces, significantly correlated with the EAE scores **(A, D, G)**, perivascular cuffing (i.e., inflammation) scores **(B, E, H)**, and demyelination scores **(C, F, I)** ( $P < 0.01$ ).
