A Corrigendum on

HAX-1 Protects Glioblastoma Cells from Apoptosis through the Akt1 Pathway
by Deng, X., Song, L., Zhao, W., Wei, Y., and Guo, X. (2017). Front. Cell. Neurosci. 11:420. doi: 10.3389/fncel.2017.00420

In the original article, there was a mistake in **Figure 1B** U118 KO-1 and KO-2 as published. In **Figure 1**, the images for B U118 KO-1 and KO-2 were incorrectly provided. The corrected **Figure 1B** U118 KO-1 and KO-2 appears below.

The authors apologize for this error and state that this does not change the scientific conclusions of the article in any way. The original article has been updated.

Conflict of Interest Statement: The authors declare that the research was conducted in the absence of any commercial or financial relationships that could be construed as a potential conflict of interest.

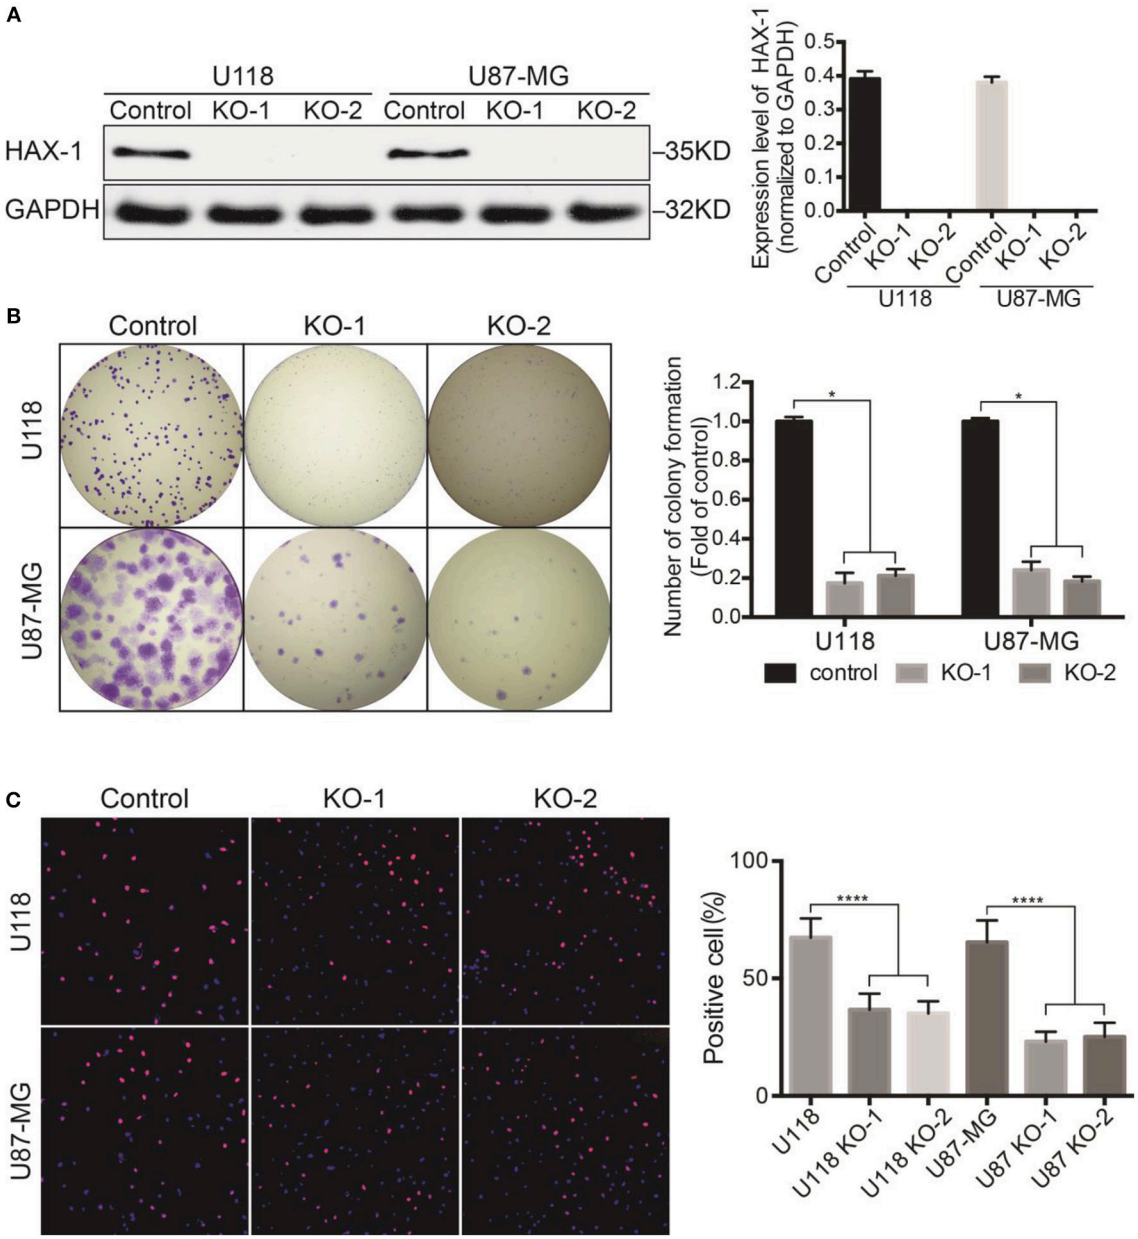

FIGURE 1 | HAX-1 regulated cell proliferation of glioblastoma cells. **(A)** Western blot showed that HAX-1 was completely knocked out in U118 and U87-MG. GAPDH was used as a loading control. **(B)** Colony formation assays indicated that the efficiency of colony formation of U118 and U87-MG cells declined after HAX-1 was knocked out. **(C)** Edu proliferation assays showed decreased proliferative U118 and U87-MG cells. Edu was labeled with red fluorescence and nuclei were stained with blue fluorescence. (magnification: 100×) Three individual experiments were performed for each group. $^{*}P < 0.05$, $^{****}P < 0.0001$.
