KEYWORDS

amyotrophic lateral sclerosis, IFN β , ALS therapy, MHC-I, gliosis, neuroprotection

A Corrigendum on

Neuroprotection by upregulation of the major histocompatibility complex class I (MHC I) in SOD1 $^{\rm G93A}$ mice

by Tomiyama, A. L. M. R., Cartarozzi, L. P., de Oliveira Coser, L., Chiarotto, G. B., and Oliveira, A. L. R. (2023). *Front. Cell. Neurosci.* 17:1211486. doi: 10.3389/fncel.2023.1211486

In the published article, there was an error in Figure 6 as published. The figure was published without the letters that identify each image. The corrected Figure 6 and its caption appear below.

The authors apologize for this error and state that this does not change the scientific conclusions of the article in any way. The original article has been updated.

FIGURE 6

V-GLUT-1 immunostaining in the ventral horn of the spinal cord. Double labeling counterstained with [(A), blue] DAPI, showing [(B), green] V-GLUT-1, and [(C), red] NeuN and (D) the merge, to evidence the immunostaining around the motoneurons located at the lamina IX of Rexed. Representative images of the (E) NTG, (F) vehicle, (G) 250 IU, (H) 1,000 IU, and (I) 10,000 IU. (J) Quantification of the integrated density of pixels for the V-GLUT-1 antibody, labeling excitatory inputs. The transgenic group showed a decrease in immunostaining as compared to the non-transgenic counterpart. The treatments further decreased immunostaining in a dose-dependent manner. (IFN β 250 UI: **p < 0.01; IFN β 1,000 UI: **p < 0.01, and IFN β 10,000 UI: ****p < 0.0001). Scale bar = 50 μ m.
