An Addendum on

Increased Circulating T Follicular Helper Cells Induced via IL-12/21 in Patients With Acute on Chronic Hepatitis B Liver Failure

By Du B, Teng J, Yin R, Tian Y, Jiang T, Du Y and Cai W (2021). *Front. Immunol.* 12:641362. doi: 10.3389/fimmu.2021.641362

In response to comments on PubPeer, the author uploaded the raw data as **Supplementary Material 2** to support Figures 4A–C in the original file. The authors apologize to the readership for any inconvenience caused.

These experiments were completed from July to September 2012. The workspace can't be used due to the upgrade of the version of FlowJo. The data were reanalyzed using the same gating and labelling in FlowJo version 10.6. The results are presented in the format of Pseudocolour. The trend of the data has not changed, which does not affect the original results.

The authors uploaded the FCS format raw data and Pseudocolour format graphical of all 6 patients, which mentioned in the original article (n=6, and original figure 4 shows the flow analysis data of patient #1).

The documents are as follows:

1) Data 1: FACS raw files of patient (n=6. A patient's data is summarized in a folder. Each folder contains 23 FCS files, which are marked according to the processing.)

2) Data:2: Figure panels of Pseudocolour format graphical (n=6. One page per patient) in PPT.
