### A Corrigendum on:

#### Eosinophils and Neutrophils Eliminate Migrating *Strongyloides ratti* Larvae at the Site of Infection in the Context of Extracellular DNA Trap Formation

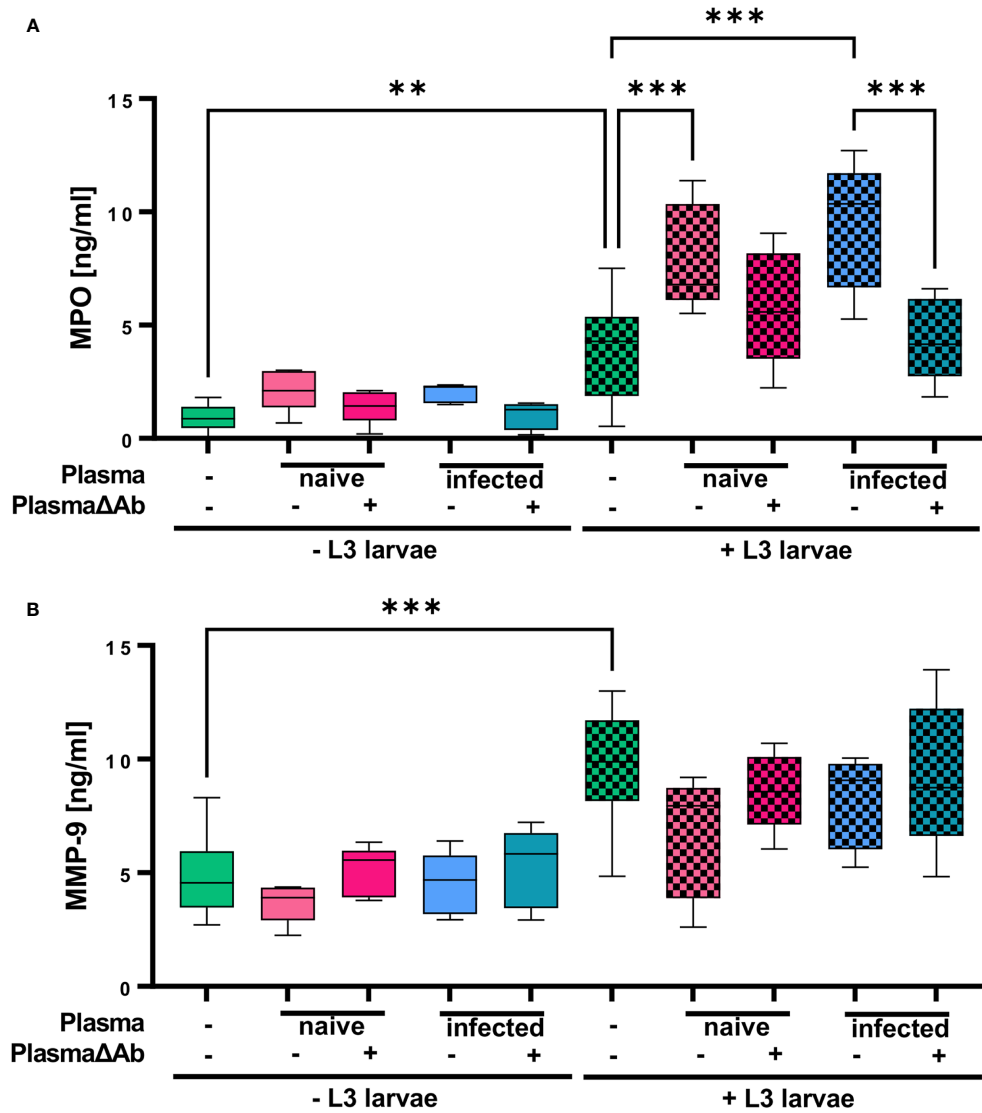

By Ehrens A, Rüdiger N, Heepmann L, Linnemann L, Hartmann W, Hübner MP and Breloer M (2021). *Front. Immunol.* 12:715766. doi: 10.3389/fimmu.2021.715766

In the original article, there was a mistake in **Figure 6** as published. **The units of the axis was indicated in µg/ml and should be corrected to ng/ml.** The corrected **Figure 6** appears below.

The authors apologize for this error and state that this does not change the scientific conclusions of the article in any way. The original article has been updated.

**FIGURE 6** | *S. ratti* L3 induce release of MPO and MMP-9-containing granules. **(A)** MPO and **(B)** MMP-9 concentration measured in the supernatant of neutrophils stimulated with plasma from *S. ratti*-infected or naive animals, *S. ratti* L3 larvae alone or in combination with plasma. Plasma has been left untreated or antibody-depleted ( $\Delta$ Ab). Shown are box plots with tukey with  $n=5$ . One out of two independent experiment. One-Way ANOVA with Bonferroni post-hoc test. Only statistically significant comparisons are depicted, all other comparisons were statistically not significant.  $p < 0.01$  \*\*,  $p < 0.001$  \*\*\*.
