An Erratum on

Plasma protein profiling reveals dynamic immunomodulatory changes in multiple sclerosis patients during pregnancy

By Papapavlou Lingehed G, Hellberg S, Huang J, Khademi M, Kockum I, Carlsson H, Tjernberg I, Svenvik M, Lind J, Blomberg M, Vrethem M, Mellergård J, Gustafsson M, Jenmalm MC, Olsson T and Ernerudh J (2022) *Front. Immunol.* 13:930947. doi: 10.3389/fimmu.2022.930947

Due to a production error, the line “113/33 proteins, odds ratio (OR): 98.9, $p=4.85e-09$, Fisher’s exact test, Figure 4B” was incorrectly inserted.

A correction has been made to the section “**Results**”, sub-section “**Differentially expressed proteins during pregnancy in MS**”, paragraph three. The corrected text appears below:

“13/33 proteins, odds ratio (OR): 98.9, $p=4.85e-09$, Fisher’s exact test, Figure 4B”

Due to the same error, the line “remains to be determined” was also incorrectly omitted.

A correction has been made to the section “**Discussion**”, paragraph two. The corrected text appears below:

“However, whether the circulating levels of IL-10RB and CSF-1 are associated with beneficial effects on CNS inflammation remains to be determined.”

The publisher apologizes for these mistakes.
