conservation translocation, critically endangered species, estuarine pipefish, inbreeding, next-generation sequencing, population genomics, seagrass fauna, *syngnathus watermeyeri*

A Corrigendum on

The last two remaining populations of the critically endangered estuarine pipefish are inbred and not genetically distinct

by Weiss S-E, Emami-Khoyi A, Kaiser H, Cowley PD, James NC, Jansen van Vuuren B, Whitfield AK and Teske PR (2022) *Front. Mar. Sci.* 8:756595. doi: 10.3389/fmars.2021.756595

In the published article, there was an error regarding the affiliation(s) for Nicola C. James. The author was incorrectly listed as belonging to affiliation 2 only, but is also affiliated with 3. The correct affiliation details appear as follows:

Sven-Erick Weiss^{1,2}, Arsalan Emami-Khoyi^{1*}, Horst Kaiser², Paul D. Cowley³, Nicola C. James^{2,3}, Bettine Jansen van Vuuren¹, Alan K. Whitfield³ and Peter R. Teske^{1*}

¹Centre for Ecological Genomics and Wildlife Conservation, Department of Zoology, University of Johannesburg, Auckland Park, South Africa

²Department of Ichthyology and Fisheries Science, Rhodes University, Makhanda, South Africa

³National Research Foundation—South African Institute for Aquatic Biodiversity, Makhanda, South Africa

The authors apologize for this error and state that this does not change the scientific conclusions of the article in any way. The original article has been updated.
