A Corrigendum on

Development and Validation of a Nomogram for the Prediction of Hospital Mortality of Patients With Encephalopathy Caused by Microbial Infection: A Retrospective Cohort Study
by Zhao, L., Li, Y., Wang, Y., Gao, Q., Ge, Z., Sun, X., and Li, Y. (2021). Front. Microbiol. 12:737066. doi: 10.3389/fmicb.2021.737066

In the original article, there was a mistake in **Figure 1** as published. Patients with sepsis without encephalopathy should be 1480. We wrote this as 1408 by error. Therefore 3279 patients for the final analysis should be modified to 3207. In the excluded patients, all excluded patients add up to 2152, not 3560. Therefore, there are three numbers in Figure 1 that need to be changed. (1) "sepsis without encephalopathy (n=1408)" changed to "sepsis without encephalopathy (n=1480)." (2) "3279 patients for the final analysis" changed to "3207 patients for the final analysis." (3) "Exclude the following patients (n=3560)" changed to "Exclude the following patients (n=2152)." The corrected **Figure 1** appears below.

We apologize for this error and state that this does not change the scientific conclusions of the article in any way. The original article has been updated.
