karyopherin subunit alpha 4, pancreatic ductal adenocarcinoma, prognostic biomarker, tumor microenvironment, FAK signaling

A corrigendum on

Systematic characterization of the clinical relevance of KPNA4 in pancreatic ductal adenocarcinoma

by Bao JP, Xu CL, Li B, Wu ZK, Shen J, Song PL, Peng Q and Hu GY (2022) *Front. Oncol.* 12:834728. doi: 10.3389/fonc.2022.834728

Error in Figure

In the published article, there was an error in [Figures 4F](#) and [4H](#) as published. The group names were erroneously interchanged. The corrected [Figures 4F](#) and [4H](#) and its caption “[Figure 4](#). KPNA4 knockdown inhibits proliferation and migration of PDAC cells” appear below.

We apologize for this error and state that this does not change the scientific conclusions of the article in any way. The original article has been updated.

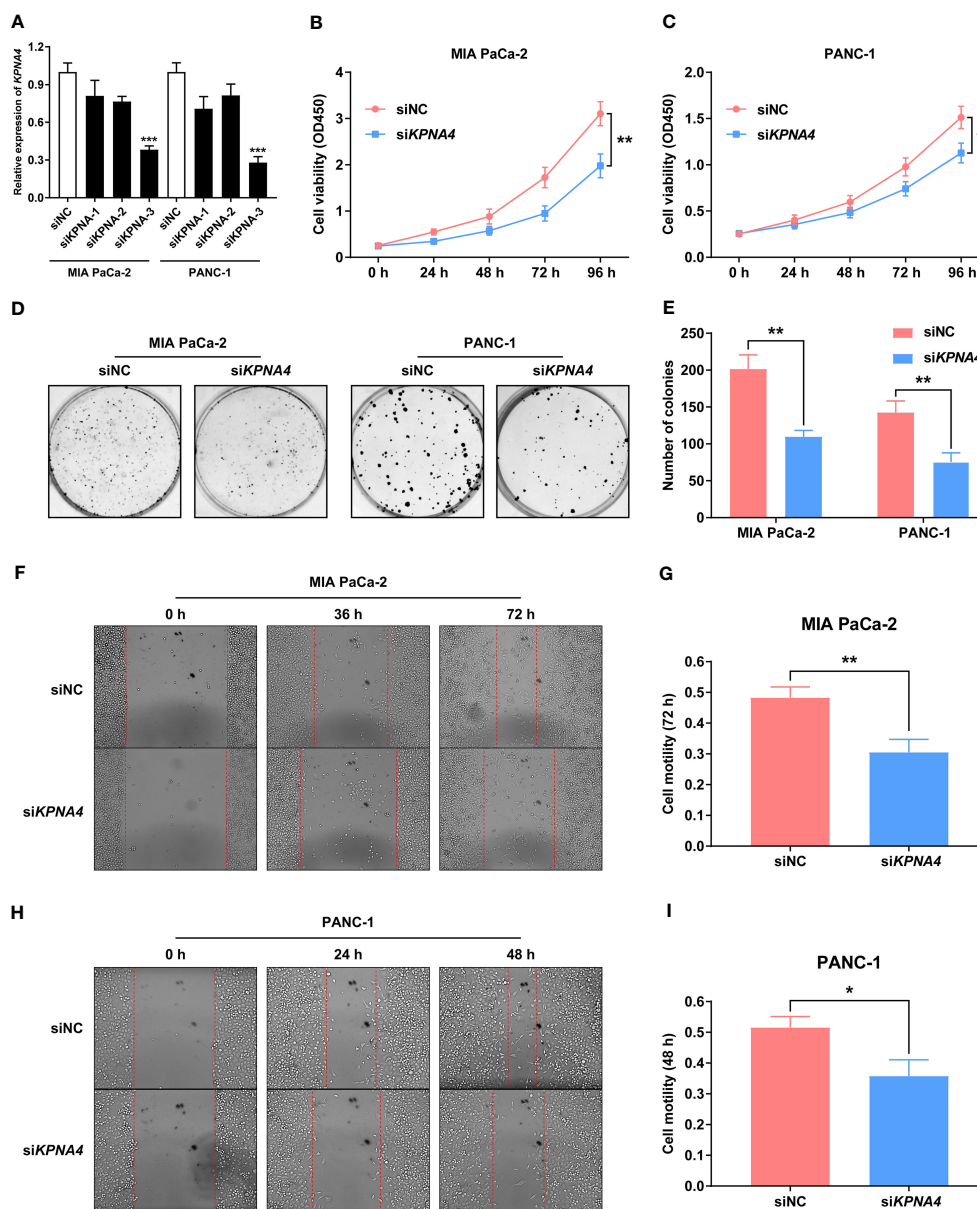

FIGURE 4 *KPNA4* knockdown inhibits proliferation and migration of PDAC cells. Knockdown efficiency of three siRNA on *KPNA4* was detected by qRT-PCR (A). *KPNA4* knockdown suppressed cell proliferation of MIA PaCa-2 (B) and PANC-1 cells (C). *KPNA4* knockdown inhibited the colony formation of MIA PaCa-2 and PANC-1 cells (D, E). The inhibitory effect of *KPNA4* knockdown on MIA PaCa-2 (F) and PANC-1 (H) cell migration was evaluated by wound healing assay at different time points, and the migration index was shown in (G, I). **p* < 0.05, ***p* < 0.01, ****p* < 0.001.
