### Corrigendum on

Pinocembrin Decreases Ventricular Fibrillation Susceptibility in a Rat Model of Depression by Ye, T, Zhang, C, Wu, G, Wan, W, Guo, Y, Fo, Y, Chen, X, Liu, X, Ran, Q, Liang, J, Shi, S, and Yang, B (2020) Front. Pharmacol. 11:547966. doi: 10.3389/fphar.2020.547966

In the original article, there was a mistake in **Figure 6** as published. The unit of ordinate "s" was incorrectly written as "ms" in **Figures 6A-D**. The corrected **Figure 6** appears below.

In the original article, there was an error. We missed the word "increases" in the section of Limitations. A correction has been made to **Limitations**, Sentence 13:

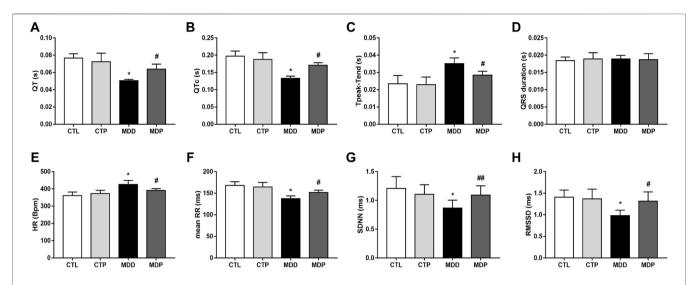

"In the present study, pinocembrin attenuates ventricular electrical remodeling, autonomic remodeling, and ion-channel remodeling (Cav1.2 and Kv4.2), lowers ventricular fibrosis, increases the expression of Cx43, and suppresses the inflammatory responses, which helps to decrease VAs in rats at the level of the heart."

The authors apologize for this error and state that this does not change the scientific conclusions of the article in any way. The original article has been updated.
