## KEYWORDS

lightning-generated whistlers, wave propagation, wave-normal angle, refractive index, attenuation laws, WWLLN database, radiation belts, Van Allen Probes

## A Corrigendum on Propagation and dispersion of lightning-generated whistlers measured from the van allen probes

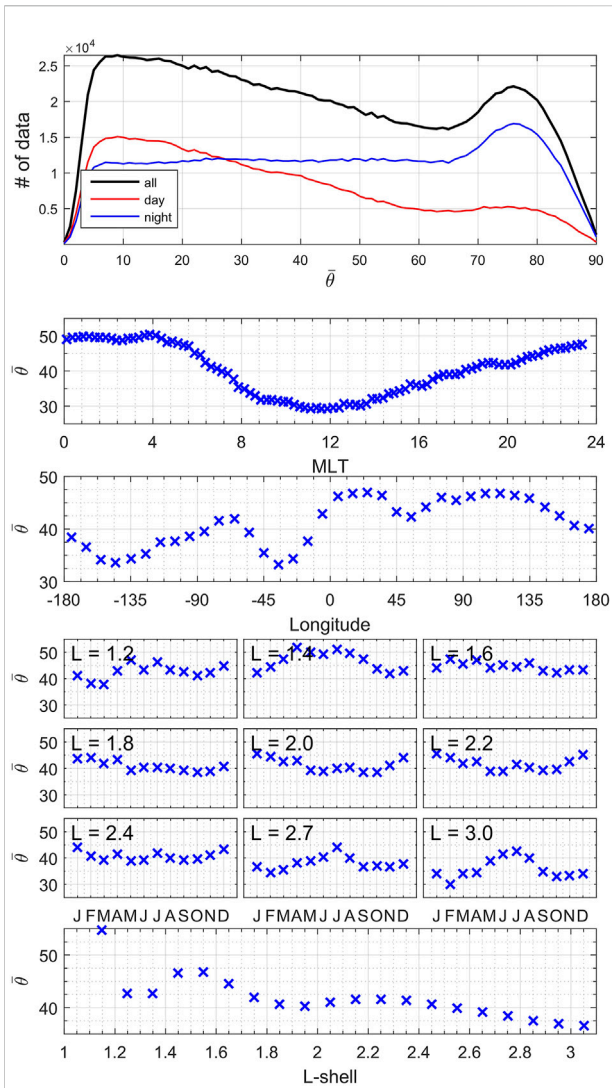

by Ripoll J-F, Farges T, Malaspina DM, Cunningham GS, Hospodarsky GB, Kletzing CA and  
Wygant JR (2021) *Front. Phys.* 9:722355. doi: 10.3389/fphy.2021.722355

In the original article, there was an error in [Figure 8](#) as published. The image used in [Figure 8](#) was the same as the one used in [Figure 10](#). The correct [Figure 8](#) and its caption appear below.

The authors apologize for this error and state that this does not change the scientific conclusions of the article in any way. The original article has been updated.

## Publisher's note

All claims expressed in this article are solely those of the authors and do not necessarily represent those of their affiliated organizations, or those of the publisher, the editors and the reviewers. Any product that may be evaluated in this article, or claim that may be made by its manufacturer, is not guaranteed or endorsed by the publisher.

**FIGURE 8**  
 (first panel) Distributions of the wave normal angle ( $\bar{\theta}$ ) (in  $^{\circ}$ ) at (red) day (6–17 MLT), (blue) night (18–5 MLT), (black) all times. Wave normal angle is plotted versus (second panel) MLT and (third panel) longitude. The day/night differences appear clearly but not the continental dependence. (fourth panel) Monthly and (fifth panel) total average of wave normal angle versus L-shell. No simple seasonal dependence is found.
