## KEYWORDS

child maltreatment, cortisol, oxytocin, residential care facility, hormones

## A corrigendum on

### Effect of the nature of subsequent environment on oxytocin and cortisol secretion in maltreated children

by Mizushima SG, Fujisawa TX, Takiguchi S, Kumazaki H, Tanaka S and Tomoda A (2015). *Front. Psychiatry* 6:173. doi: 10.3389/fpsy.2015.00173.

In the published article, there was an error in **Materials and Methods, Participants, Paragraph 1**. The number of participants diagnosed with reactive attachment disorder was mistakenly omitted. This sentence previously stated:

“The types of abuse experienced in the CM group were as follows: neglect (62%), physical abuse (35%), emotional abuse (16%), and sexual abuse (14%).”

The corrected sentence appears below:

“The types of abuse experienced in the CM group were as follows: neglect (62%), physical abuse (35%), emotional abuse (16%), and sexual abuse (14%). Of the 38 children who experienced CM, 13 met the DSM-5 diagnostic criteria for reactive attachment disorder.”

The authors apologize for this error and state that this does not change the scientific conclusions of the article in any way.
