A corrigendum on

[Using interpersonal dimensions of personality and personality pathology to examine momentary and idiographic patterns of alliance rupture](#)

by Luo, X., Hopwood, C. J., Good, E. W., Turchan, J. E., Thomas, K. M., and Levendosky, A. A. (2021). *Front. Psychol.* 12:711109. doi: 10.3389/fpsyg.2021.711109

This is the corrigendum to the original article “*Using Interpersonal Dimensions of Personality and Personality Pathology to Examine Momentary and Idiographic Patterns of Alliance Rupture*” (Luo et al., 2021). The original article examined momentary patterns of interpersonal behaviors and alliance ruptures in each of the psychotherapy demonstration videos between the patient Gloria and three prominent therapists. In the original article, we depicted the diagrams of the dynamic structural equation modeling for each session in [Figures 2, 4, 6](#). In these diagrams, we showed two types of effects (1) an autoregression effect for each variable, in which one variable at time t predicts its state at time $t + 1$ (1 refers to the unit of time interval in the model); and (2) the concurrent associations

among interpersonal variables and among rupture variables at time $t + 1$. The original figures of Figures 2, 4, 6 wrongly depicted the concurrent associations for variables at time t instead of variables at time $t+1$. The correct versions of the Figures 2, 4, 6 are updated and included below.

The authors apologize for this error and state that this does not change the scientific conclusions of the article in any way. The original article has been updated.
